N

```
The present sequence encodes a human platelet-derived growth factor C (PDGF-C) (formally designated VBGF-F) fragment. PDGF-C polypeptides have the ability to stimulate and enhance proliferation or differentiation, and/or growth or motility of cells expressing a PDGF-C receptor.

and/or growth or motility of cells expressing a PDGF-C receptor.

PDGF-C polypeptides can be used in pharmaceuticals for promoting cell proliferation, preferably in combination with one other growth factor and heparin. Pharmaceuticals compressing PDGF-C polypeptides can also be used for stimulating connective tissue or wound healing. The PDGF-C polypeptide can be enzymatically processed to generate the active truncated form of PDGF-C and used to regulate the receptor-binding specificity of PDGF-C and used to regulate the receptor-binding specificity of PDGF-C and used to induce PDGF used to promote fibroblast connected form of unduce PDGF used to induce PDGF at unduring inventy, megakaryoblastic contraction.

PDGF-C antagonists can be used to inhibit tumour growth of a tumour correction, will be used to inhibit tissue of pDGF-C. PDGF-C antagonists can also be used to inhibit tissue carcinoma and erythroleukemia, can be identified by testing for expression of remodelling during linvasion of tumour cells into a normal population of cells. Antagonists can also be used to treat fibrotic conditions, cells into a normal population of especially found in the lung, kidney or liver.
                                                                                                                                                                                                                                                                                                                            Novel DNA encoding PDGF-C useful to stimulate or enhance proliferation, differentiation, growth and motility of cells expressing the PDGF-C
                                                                                                                                                                                                ĸ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes the isolation of a novel human vascular endothelial cell growth factor-E (VEGF-E) polypeptide which has endothelial cell growth factor-E (VEGF-E) polypeptide which has cranged to tranquillizer, vulnery and cardiant activity. VEGF-E can be administered therapeutically, especially by expressing encoding polynucleotides, to treat cardiovascular or endothelial disorders in mammals, especially commanders in wammals, especially commanders in wammals, especially commanders in mammals, especially commanders in mammals, especially can be combined with a carrier in pharmaceutical compositions, which can be administered to treat disorders as above. VEGF-E can be used to creat angiogenic disorders in mammals (especially humans) e.g. cancer or serelated macular degeneration. It can be used to generate antibodies, useful therapeutically as antagonists, as above. The antibodies are also useful therapeutically as antagonists, as above. The antibodies are also useful to detect VEGF-E polypeptide, especially to diagnose cardiovascular, endothelial or angiogenic disorders in mammals (e.g. vascular disease, or neovascularization associated with tumor formation, by contacting the antibody with a tissue sample and detecting formation of an antibody-VEGF-E polypeptide complex. Polynucleotides encoding VEGF-E can be used to diagnose cardiovascular and endothelial disorders in mammals, by detecting abnormally high or low VEGF-E can be used to diagnose cardiovascular and endothelial endothelial customs in mammals, by detecting abnormally high or low VEGF-E gene expression in the susceptibility to a disease related to a mutated form of VEGF-E or

                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of human vascular endothelial cell growth factors. B (VBGF-B, also referred to as PRO:200), and the polywucleotide sequence encoding it. VBGF-E is related to VBGF and bone morphogenetic protein I. VBGF-E is useful in wound repgir, as well as in the generation and regeneration of trissue. The sequences of the invention are useful for diagnosing or treating cardiovascular, endothelial or angiogenic disorders such as cancer, diabbetes mellitus, cardiac hypertrophy and atherosclerosis. The polymucleotide encoding VBGF-E is useful in the gene therapy of such disorders. The present sequence encodes human VBGF-E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB 25; Length 2825;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagularion disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ33391 to AAZ34338, and AAY41685 to AAY41774 represent polymucleotide and polypeptide sequence given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  64 GAATTATTACTGTGTCTACTAATGGAAGTATTCACAGGCCCAAGGTTTCCTCATACTTATC

                                                                                      AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polynecleotides and polypeptides have cytostatic activity. The PRO polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CCATTITICIGGCCAGGIIGICICCCIGGIIAAACGCIGIGGGGGAACTGIGCCIGIIGIC 783

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GAATTATTACTGTGTCTACTAATGGAAGTATTCACAGCCCAAGGTTTCCTCATACTTATC 123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of CDNA clone DNA29101-1272 or UNQ174 (ATC 20953) isolated from a human glioma cell line G61 CDNA (ATC 20953) isolated from a human glioma cell line G61 CDNA (ATC 20953) isolated from a human glioma cell line G61 CDNA (as delay, using probes (see AAA88523-36) based on an expressed sequence tag (see AAA88522) identified on the basis of homology to vascular endothelial growth factor (VEGF). The clone contains a single open creading frame encoding a 345-amino acid protein (see AAB39578) designated PRO200 or VEGF-E. The isolated CDNA can be used in the recombinant production of PRO200 (VEGF-E). The invention relates to the use of FRO polypeptides, including PRO200, to delay, prevent or rescue retinal cells such as retinal neurons selected from photoreceptors, retinal ganglion cells, displaced retinal ganglion cells, displaced retinal and photoreceptors, and supportive cells (including Mueller cells and pigment epithelial cells) from injury and degradation. The retinal cells are preferably photoreceptors and photoreceptor cell injury or death is caused by retinal injury, light or environmental trauma or by an ocular disease selected from retinitis pigmentosa, macular cears, retinal age-related, retinal degenerative myopia, acute retinal necrosis syndrome, traumatic chorioretinopathies or contusion such as Purtscher's retinapathy, contustion such as central or branch retinal vision occlusion, collagen vascular diseases, thrombocytopenic purpura, and collagen vascular diseases, thrombocytopenic purpura, and collagen vascular diseases, thrombocytopenic purpura, and collagen vascular diseases, thrombocytopenic purpura, and collagen vascular diseases, thrombocytopenic purpura, and collagen vascular diseases, thrombocytopenic purpura, and collagen vascular diseases, thrombocytopenic purpura, and collagen vascular diseases, thrombocytopenic purpura, and collagen vascular diseases, thrombocytopenic purpura, and collagen vascular diseases, thrombocytopenic purpura, and collagen vascular diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Kabakoff RC;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel PRO polypeptides useful for preventing or rescuing retinal cells from injury caused by ocular diseases such as retinitis pigmentosa, retinopethy, retinal degenerative diseases, degenerative myopia, uveltis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GTAAATTCCAGTTTTCCAGCAACAAGAACAGAACGGAGTACAAGATCCTCAGCATGAGA

                                                                                                                          The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovacular, endothelial or analysemic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovacularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovacular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCS) and vectors associated with decreased PRO expression. AAA77510 to AAA77721 and AAB24388 to AAB2438 to AAB24435 repersent nucleotide and protein sequences used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TTGTAGAAGTTGGGAACCCAGTGATGGAACTATATTAGGGCGCTGGTGTGGTTCTGGTA

breast; prostate; cervical; tumour necrosis factor-alpha; TNF-alpha; cartilage; ear; proliferation; glucose; free fatty acid; skeletal muscle; adipocyte; A-peptide; factor VIIA; gene therapy; ss. AAS11244-AAS21518 encode for novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bloactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TPF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or gene expression in pericyte cells, the release of proteoglycans from of T-lymphocytes, the release of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify cartilage, the proliferation of inner ear utricular supporting cells or 3 Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumours e.g. Gao Beresini M, Deforge L, Desnoyers L, Filvaroff E, Ga ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Stewart TA, Tumas D, Watanabe CK, Wood WI, Zhang Z; Claim 3; Fig 285; 813pp; English. breast, prostate, cervical 2000WO-US07377. 2000WO-US07532. 2000WO-US08439. 2000WO-US13705. 99WO-US28301. 99WO-US28634. 99WO-US28551. 2000WO-US00376. 2000WO-US03565. 2000WO-US04914. 2000WO-US05004. 99WO-US31243. 2000WO-US04341. 2000WO-US04342. 2000WO-US04414. 2000WO-US32678 **US28565** US30095 99WO-US30911 99WO-US30999 2000WO-US05004 2000WO-US05601 2000WO-US14042 US28564 2000WO-US15264 Baker KP, Beresini M, (GETH) GENENTECH INC. -SU66 2001-408281/43. -0M66 2000WO-P-PSDB; AAU12314.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is one of seventeen nucleic acids encoding PRO polypeptides. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating cardiovascular, endothelial or antigonic disorders in a mammal. Examples of these disorders include cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, Reynaud's disease, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis and lymphangitis. The PRO polypeptides and antagonists are also used to prevent tumour angiogenesis and for treating periodontal diseases. They are also used to stimulate wound healing and tissue regeneration. The PRO nucleic acids, polypeptides and anti-PRO antibodies are useful for diagnosing a cardiovascular, endothelial or angiogenic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CAAGAAATACGGTCTTGGTATGGAGATTAGTAGCAGTAGAGGAAAATGTATGGATACAAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention discloses the coding and protein sequences of human proteins PRO526, PRO719, PRO725, PRO1031 and PRO200. These proteins, their coding sequences and antibodies can be used in the treatment of immune-related diseases, including systemic lupus erythematosus, rheumatoid arthritis, thyroiditis, immune-mediated renal disease, demyelinating diseases such as multiple sclerosis, hepatobiliary diseases including primary biliary cirrhosis, inflammatory bowel disease, immune-mediated skin diseases such as psoriasis, allergic diseases including asthma, immunologic diseases of the lung, transplantation associated diseases and infectious diseases such as HIV and hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   426

PT Genetic disorders and treating cardiovascular, endothelial or angiogenic disorders and treating cardiovascular, endothelial or angiogenic disorders, such as atherosclerosis, wounds or cancer.

PT angiogenic disorders, such as atherosclerosis, wounds or cancer.

EXX claim 58, Fig 21A-B; 293pp; English.

CThe invention relates to novel human angiogenesis-associated proteins comprising a PRO proteins (AAB3504-B53097), and to nucleic acids encoding comprising a PRO mucleic acid, the recombinant production of a PRO protein. PRO antibodies specific for a PRO protein, fusion proteins comprising a PRO nucleic acid, the recombinant production of a PRO protein, and compounds which inhibit the expression of a PRO gene. The invention additionally encompasses methods of identifying modulators of PRO compounds which inhibit the expression of a PRO protein, and compounds which inhibit the expression of a PRO protein, and compounds which inhibit the expression level of a PRO protein, or additionally encompasses methods of identifying modulators of PRO captionally encompasses methods of identifying modulators of PRO captional protein, protein, PRO additionally encompasses methods of inhibiting or stimulating endothelial or particular tissue; treating a cardiovascular, endothelial or angiogenesis of a protein, or PRO administration of a PRO protein, or an agonist or antagonist; a rectroating or stimulating endothelial captionascular, endothelial or angiogenesis via the administration of a PRO protein, or an agonist and PRO atteoporosis, myocardial infarction, hypertension, cardiopenic captiopenic disorders, such as a therrosclerosis, olders and PRO atteoporosis, myocardial infarction, hypertension, ciabetic retinopathy, rheumacoid arthritis, crown as producinon of PRO proteins, as hybridistation probes to cardiometriosis, ulcers, wounds, cancer, Alzheimer's disease, proteins, or stroke. PRO mucleic acids are additionally useful in the recombinant production of PRO proteins, to analyse genes encoding PRO proteins, to analyse g

New secreted and transmembrane PRO nucleic acids, useful for gene therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to the isolation of novel human PRO polypeptides, and the polynuclectide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beresini M, DeForge L, Desnoyers L, Filvaroff E, G

for modulating biological activities of cells expressing PRO polypeptides, and for identifying agonists or antagonists.

The PRO polypeptides are useful for for stimulating the release of tumour necrosis factor (TMF)-labha from human blood, for stimulating the proliferation or differentiation of chondrocytes, and detecting the presence of tumours. The polymolecitide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the genetic analysis of individuals with genetic disorders, and in gene therapy. ACA03803-ACA03877 represent cDNAs encoding the human PRO polypeptides of the invention.

New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer

Claim 2; Fig 285; 659pp; English.

The invention relates to an isolated nucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 275 nucleotide sequences, encoding the corresponding PRO polypeptide (one of 275 secreted or transmembrane proteins). The nucleic acid further comprises the full-length coding sequence of the DNA deposited curther comprises the full-length coding sequence of the DNA deposited given in the specification. Also included are vectors and host calls for producing PRO proteins, PRO fusion proteins, anti-PRO actionates and mature sequences, methods of detecting PRO proteins, methods for stimulating the release of TNF-alpha (tummur necrosis factor alpha) from human blood, and the proliferation of differentiation of fundrocyte cells, the release or proliferation of, or gene expression in pericyte cells, the release or proteoglycans from cartilage, proliferation of fundrocyte cells, the release of cytokine from peripheral blood monounclear cells, the release of a cytokine from peripheral blood monounclear cells, the release of proliferation of endothelial cells, a method for modulating the uptake of glucose or free fatty acid (FFA) by skeletal muscle cells, cor the differentiation of adipocyte cells, a method for inhibiting the bluding of A-pepting to factor VIIA, or the differentiation of adipocyte cells, a method for detecting the proliferation of adipocyte cells, a method for detecting cor from any of the nucleocities sequences cited above The nucleic acids and colypeptides are useful for treating inflammatory diseases, organ farm and any perhanement of failure, atherosclerosis, cardiac injury, infertility, birth defects, or premature aging, AIDS (acquired immunodeficiency syndrome), cancer, or

c complications. The nucleic acids are useful as hybridisation in chromosome and gene mapping, and in generating antisense RNA the polypeptides are useful as pharmaceuticals, diagnostics, ors or bioreactors. Both are useful in tissue typing. sent sequence encodes a PRO protein of the invention. e 2849 BP; 851 A; 528 C; 619 G; 850 T; 1 other; h 99.8%; Score 1532.6; DB 25; Length 2849; Similarity 99.9%; Pred. Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 and PRO1375, which stimulate proliferation of stimulated T-lymphocytes are therapeutically useful for enhancing immune response and in cancer

Claim 2; Fig 285; 659pp; English

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in complete are useful in detecting PRO polypeptides in a sample, in complete a biological activity of a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO colypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus complete. PRO1312 stimulates hypertrophy of neonatal heart and is thus complete. PRO1312 stimulates hypertrophy of neonatal heart and is thus stimulate adrenal cortical capillary endothelial growth, and PRO136, PRO136, pRO136, pRO136, pRO136, pRO136, pRO136, pRO136, pRO136, proders where angiogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating conditions or disorders melgingly properties are calculated protiferation of endothelial growth in the protiferation of mammals which would be beneficial in inhibiting tumour growth. PRO826, pro136, and PRO136 stimulated proliferation of stimulated T-lymphocytes and are therapeutically useful for enhancing immune response. PRO828, PRO1068 or PRO1132 enhance survival/proliferation of cells in and in naurons cells (PRO1312 is also enhances survival/proliferation of disorders of injuries, e.g. returnlist pigmentoeum, AMD. PRO819, pro826, and therefore are useful for treating the proliferation of mammalian kidney meanigial cells, and therefore are useful for treating sports injuries, and arthritis. This sequence encodes a novel human PRO protein.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                    1 cgggtaaattccagttttcc......tgctgataggacagactgga 1536
